Consortium/LIANL at: http://image.llnl.gov Series: IRAL Plate: 39 Row: p Column: 13
This clone was selected for full length sequencing because it passed the following selection criteria: Similarity but not identity to protein
This clone has the following problem: retained intron.

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LINL at: http://image.llnl.gov Series: IRAK Plate: 79 Row: d Column: 15
This clone was Balected for full length sequencing because it passed the following selection criteria: Similarity but not identity to protein
This clone has the following problem: retained intron.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4;

NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                       Insert size: 167000; agarose-fp
Insert size: 158251; sum-of-contigs
Quality coverage: 4.9 in Q20 bases; agarose-fp
Quality coverage: 5.2 in Q20 bases; sum-of-contigs

It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             25110: contig of 59110 bp in length

Sequencing vector: Plasmid; pUC18
Chemistry: Dye-terminator Big Dye
Assembly program: Phrap version 0.990329.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        end information.
                                                                                                                                                                                                                                                                                                    Cercopithecinae; Papio.

On Nov 30, 2001 this sequence version replaced gi:16944853.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., pared quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary a covered on numbers given
in the feature table with their source databases: Em:, EMBL: Sw:,
SWISSPROT; Tr:, TREMBL: WD:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                  3938
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AL157935 164201 bp DNA linear PRI 09-JAN-2002 Human DNA sequence from clone RP11-203J24 on chromosome 9, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                               NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 36 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 5:1-8. The clone may be obtained either from and coworkers at the Roswell Park Cancer Institute

On May 14, 1999 this sequence version replaced gi:3309089.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The clone sequenced to the left is RP11-13J8; the clone sequenced

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes an isolated polypeptide segment (I) whose genes are fat regulated. (I) or the polynucleotide encoding it (II) are useful for diagnosing the presence of or a predisposition for a disorder involving fatty acid regulated genes in a subject. A composition containing (I) or (II) is useful for treating a disorder involving fatty acid regulated genes; where the disorder is selected from a cid regulated genes, where the disorder; eczema, cardiovascular disorders (such as hypertriglyceridaemia, dyslipidaemia, atherosclerosis, polyunsaturated fatty acid (PUFA) disorder, eczema, atherosclerosis, coronary artery disease, cerebrovascular disease or peripheral vascular disease, inflammation (such as sinusitis, astuma, pancreatitis, coronary artery disease, cerebrovascular disease or peripheral vascular (such as obesity, cachexia or anorexia), psychiatric disorders, cachexia or anorexia), psychiatric disorders, complications. (I) or (II) is useful as research agent and materials for disease. (II) is useful for constructing nucleotide probes and primers, for detecting genetic polymorphism, for detecting changes in the level of expression of (II), and as a diagnostic tool. This sequence represents a control region from a gene encoding a fatty acid regulated protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2240

The present sequence is that of the promoter region of the human stearoyl cot desaturase-1 (hSCD1) gene. The promoter structure is similar to that of the mouse SCD1 promoter and contains conserved regulatory sequences for the binding of several transcription factors. Like the mouse SCD1, the human SCD1 gene is regulated by polyunsaturated fatty acids and cholesterol at the level of gene transcription. The sterol regulatory element binding protein (SREBP) plays a role in the transcriptional activation of the gene. The promoter can be used to identify regulatory elements that modulate and control SCD1 expression in humans, and to identify regulatory proteins that are suitable targets for small molecule intervention to modulate expression of SCD1 in humans. The invention cidentify regulatory proteins that control SCD1 in humans diseases, disorders or conditions relating to serum levels of triglyceride, very low density lipoprotein, high density lipoprotein, low density in propositions relating to serum levels of triglyceride, very lipoprotein, total cholesterol, or production of secretions from mucous membranes, monounsaturated fatty acids, wax seters, etc. Methods for diagnosing and treating such disorders using modulators of SCD1 activity are also provided. These disorders using modulators of SCD1 activity are also provided. These disorders using modulators of SCD1 activity diverse maladies, such as cancer and multiple sclerosis, non-insulindely various seases, and immune disorders as well as cholesterol disorders, eye discenses, and contains and cancer and multiple sclerosis, one insulindely disorders and multiple activity in this dense mediannes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying an agent for treating disorders related to serum levels of fatty acids and glycerols, by contacting screening assay with delta-9 stearoyl-CoA desaturase activity with compound and measuring the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3459 CCCAGCCCCTTCCAGAGAAAAGCTCCCGACGCGGGATGCCCGGGCAGAGGCCCAAGAGGCGCG
